

**REMARKS**

Claims 1-4 were pending in the application. Claims 1 and 3 have been amended. No claims have been canceled. Claims 5-8 have been added. No new matter has been added. Therefore, claims 1-8 are now pending in the application. Reconsideration of the application is requested for at least the reasons that follow.

**35 U.S.C. 102(b) and 35 U.S.C. 103(a) Rejections**

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by, or alternatively, under 35 U.S.C. 103(a) as being unpatentable over JP 56-18500 (hereinafter “Sho”). Alternatively, claims 1-4 are also rejected under 35 U.S.C. 103(a) as being unpatentable over Sho in view of U.S. Patent No. 4,892,036 (hereinafter “Lange”). Claims 1 and 3 are independent.

The rejection of independent claims 1 and 3 should be withdrawn at least because the references, either taken separately or together, fail to disclose, teach or suggest the elements of claims 1 and 3. For example, Sho and Lange fail to disclose, teach or suggest a “folding cylinder rotating cam that rotates separately from the rotation of the folding cylinder ... [and] a jaw cylinder rotating cam that rotates separately from the rotation of the jaw cylinder,” as required by amended claims 1 and 3. Sho does not disclose that the jaw rotating cam rotates “separately” from the rotation of the jaw cylinder. Sho discloses that a rotating cam for the pins and a rotating cam for the folding blades rotate in accompaniment with rotation of the folding cylinder. *See* Translated Abstract of Sho, p. 1, line 30 – p. 2, line 4. If the rotating cams of Sho rotate “in accompaniment” and are capable of rotating in an integral manner, then Sho clearly does not disclose that the jaw rotating cam rotates “separately” from the jaw cylinder rotation and the folding cylinder rotating cam “rotates separately” from the rotation of the jaw cylinder, as required by amended claims 1 and 3. Therefore, Applicants respectfully request reconsideration and withdrawal of the rejections.

Lange does not cure the deficiencies of Sho. Lange merely discloses a combination collection and folding cylinder system, which does not include “folding cylinder rotating cam that rotates separately from the rotation of the folding cylinder ... [and] a jaw cylinder rotating cam that rotates separately from the rotation of the jaw cylinder.” On the contrary, Lange only discloses a fixed folding blade control cam (23) and a fixed needle control cam (25), not

a "jaw cylinder rotating cam ... with covering sections," as required by independent claims 1 and 3. Furthermore, Lange does not teach or suggest a "folding cylinder rotating cam that rotates separately from the rotation of the folding cylinder ... [and] a jaw cylinder rotating cam that rotates separately from the rotation of the jaw cylinder," as required by amended claims 1 and 3.

Claims 2 and 4 and new claims 5-8 depend from claims 1 and 3 respectively, and are allowable therewith, for at least the reasons set forth above, without regard to the further patentable subject matter set forth in these dependent claims.

### Conclusion

Applicants believe that the present application, as amended, is now in condition for allowance. Favorable reconsideration of the application is respectfully requested.
